- Sniffing → data just can show. Can't modify. Wireshark software use for sniffing.
- Linux Command:
 - Open Terminal: type wireshark. Then enter eth0
 - Apply a display filter:
 - ip.address(also ip.addr) ==10.0.2.15 [display my pc package source and destination]
 - ip.src==10.0.2.15 [only source]
 - ip.dst==10.0.2.15 [only destination]
 - here 10.0.2.15 my Linux ip address.
 - In Linux terminal:
 - Use ifconfig to show ip address.
 - Ip address show like inet 10.0.2.15
 - In windows command:
 - ipconfig/all to show ip address
 - systeminfo →details about pc
 - In run command:
 - Type msinfo32 for windows all details
